

8. Project Demonstration

Presentation and live demo runbook

Presentation Outline

- Slide 1 — Project title and presenter details.
- Slide 2 — Problem statement and motivation.
- Slide 3 — Objectives and scope.
- Slide 4 — Architecture and data flow.
- Slide 5 — Spreadsheet structure and target fields.
- Slide 6 — Import Set and Transform Map configuration.
- Slide 7 — Field mapping and transformation execution.
- Slide 8 — Coalesce test: changed existing rows and newly added IDs.
- Slide 9 — Reports and dashboard.
- Slide 10 — Test evidence, conclusion, and future enhancements.

Live Demonstration Sequence

- Show the prepared spreadsheet and explain the five columns.
- Open the Employee Test table and show its configured fields.
- Open Load Data and show the Employee Import staging table.
- Open Sample Spreadsheet Import and review the source/target tables and field maps.
- Execute the transform and show the resulting target records.
- Explain Employee ID Coalesce, then load a test sheet containing changed existing IDs and new IDs.
- Open Transform History and show the actual insert/update/ignored outcomes.
- Re-run the identical sheet and show the actual no-change behavior.
- Open the three saved reports and the Employee Analytics Dashboards dashboard.

Demo Preparation

- Use synthetic sample data only; avoid exposing real employee information.
- Prepare a clean spreadsheet and a second version with two changed existing IDs and two new IDs, mirroring the source document's test pattern.
- Ensure the Transform Map is saved and Coalesce is enabled before the repeat-import demonstration.
- Capture screenshots as backup in case the live instance is unavailable.
- Record actual results and counts in the presentation; do not use expected counts as observed results.

Closing Summary

The demonstration should show the complete path from spreadsheet preparation to staging, field mapping, transformation, duplicate/update testing, and reporting. Close by summarizing the configuration and the evidence gathered during testing.

Questions to Prepare For

- What is the purpose of an Import Set staging table?
- What does a Transform Map do?
- How are source fields mapped to target fields?
- What does Coalesce do in this project?
- How did you verify that records were inserted or updated?
- What do the reports and dashboard show?
